

**Improving Aesthetics and Amenities in Downtown**

Community assessments and surveys confirmed a desire to enhance the downtown streetscape, add supportive features for pedestrians, and improve walkability. Updating the streetscape to include bump-outs allows the space for amenities such as street trees, planting beds, pavers, benches, and lighting while maintaining the majority of the existing parallel parking spaces. The concept plan also considers eventual growth and redevelopment of key downtown areas. These downtown enhancements will help create a more functional and enjoyable experience for both pedestrians and motorists.
