

Durant Cemetery is a great place for walking, running, and biking, and has great shade in the summertime.

The sidewalks on Main Street are uneven and are difficult to access from the street because of the two-step curb, especially with snow in the winter.

Accessible corners, parking and cleanliness is appreciated downtown.

Seventh Street has no sidewalks, and is an important connector for pedestrians, cyclists, and drivers.

Smooth shaded sidewalks are appreciated by kids and people who walk for exercise, as well as the mobility impaired.

Truck traffic sometimes blocks views of oncoming traffic on 5th Street.

## What Factors Affect Transportation in Durant?

Transportation is integral to small-town life and a vibrant economy. In the context of the Community Visioning Program, we recognize walking, biking, and driving as quintessential modes of travel to various destinations important to residents and visitors. Access to these destinations is crucial for many everyday activities—getting to work and school, participating in community events, and providing for basic needs such as food, health care, and healthy activity.

In this participatory assessment, we want to find out which factors and conditions affect transportation use in Durant, where these factors and conditions are most prevalent, and how they influence route and transportation choices locally. Because residents have the best knowledge of how Durant's transportation system works, we use focused, small-group conversations, mapping, and photos of the best and worst to understand local transportation.

## Different Users = Different Needs

To capture insights about transportation from a variety of perspectives, we invited Durant residents with different transportation needs to participate in focus groups. A total of 108 residents attended Durant's workshop. Participants were separated into five user groups and the Durant steering committee.

**(15 participants):** This user group represents those in the community who engage in outdoor recreation, including cycling, walking, running, swimming, skiing, etc. The availability of multiple venues for outdoor recreation matters to this group.

**(8 participants):** This user group is directly affected by accessibility barriers such as high curbing and uneven sidewalks that make it difficult to operate mobility-aiding equipment effectively. Handicapped parking, curb ramps, and smooth surfaces are critical transportation features.

**(17 participants):** Accessibility—both in terms of physical access and proximity—is a major concern for this user group. Because some people in this user group do not or are unable to drive, having goods and services within walking distance is important.

**(30 participants):** This group uses primarily non-motorized modes of transportation, so pedestrian- and bike-friendly streets and sidewalks are important. These users value the ability to get to destinations on foot or via bicycle and having goods and services within walking distance.

**(23 participants):** Safety of their children is a primary concern of this user group. Access to safe and easy routes to school activities is another significant factor to this group. Parents of young children desire smooth, wide surfaces for strollers.

**(9 participants):** The common denominator for this user group is that their observations are influenced by special knowledge of the transportation system acquired during the Community Visioning assessment process. As a result, this group is more representative of decision makers.
