

Where People Work

How Often Do You Work From Home, in Hampton, or Out of Town? (104 responses)

Approximately 65% of survey participants indicated that they are employed. Of employed respondents, 104 rated how often they work from home, work in town, and work out of town using a scale of 1 to 3, with 1 meaning never, 2 meaning sometimes, and 3 meaning always. The results indicate that most people work in Hampton, but a significant number of people work out of town.

How They Get There

This map shows the commuting routes identified in the survey. The frequency that the routes are used is depicted by their thickness, with most frequently used routes being the thickest. Ninety-one respondents provided commuting routes. Survey participants most frequently take US Highway 65 to commute into and out of Hampton. Highway 3 is the primary east-west corridor into and out of town. In town, Central Avenue (Highway 3), 4th Street NE (Highway 65), and parts of Olive Avenue are most heavily traveled by commuters. Routes to the three schools in town are also busy.

The circulation patterns that emerge when routes for biking, running, walking, and commuting are overlaid suggest suitable types of transportation enhancements. For example, where pedestrian and vehicular traffic intersect, such improvements could include creating better visibility, defining crossing points, or improving signage.
