

The trail underpass near Leonard Park provides a safe connection to the Neal Smith Trail.

The trail ending abruptly at East Northside Drive is just one example of connectivity issues in the system.

The crosswalks at the intersection of Parker Boulevard and West Broadway Street provide safe crossings for pedestrians.

Incomplete sidewalks and a lack of protection from the sun along Deer Haven make travel difficult and uncomfortable for pedestrians and cyclists.

Residents appreciate the trail in the Sandpiper Recreation Area because it is attractive and takes you right to the beach.

NW Big Creek Drive has no sidewalk (east side) or poor sidewalks (west side), effectively limiting access to Big Creek for pedestrians and cyclist.

What Factors Affect Transportation in Polk City?

Transportation is integral to small-town life and a vibrant economy. In the context of the Community Visioning Program, we recognize walking, biking, and driving as quintessential modes of travel to various destinations important to residents and visitors. Access to these destinations is crucial for many everyday activities—getting to work and school, participating in community events, and providing for basic needs such as food, health care, and healthy activity.

In this participatory assessment, we want to find out which factors and conditions affect transportation use in Polk City, where these factors and conditions are most prevalent, and how they influence route and transportation choices locally. Because residents have the best knowledge of how Polk City's transportation system works, we use focused, small-group conversations, mapping, and photos of the best and worst to understand local transportation.

Different Users = Different Needs

To capture insights about transportation from a variety of perspectives, we invited Polk City residents with different transportation needs to participate in focus groups. A total of 41 residents attended Polk City's workshop. Participants were separated into four user groups and the Polk City steering committee.

Actives

(6 participants): This user group represents those in the community who engage in outdoor recreation, including cycling, walking, running, swimming, skiing, etc. The availability of multiple venues for outdoor recreation matters to this group.

Older Adults

(3 participants): Accessibility—both in terms of physical access and proximity—is a major concern for this user group. Because some people in this user group do not or are unable to drive, having goods and services within walking distance is important.

Youth

(10 participants): This group uses primarily non-motorized modes of transportation, so pedestrian- and bike-friendly streets and sidewalks are important. These users value the ability to get to destinations on foot or via bicycle and having goods and services within walking distance.

Parents

(12 participants): Safety of their children is a primary concern of this user group. Access to safe and easy routes to school activities is another significant factor to this group. Parents of young children desire smooth, wide surfaces for strollers.

Steering Committee

(11 participants): The common denominator for this user group is that their observations are influenced by special knowledge of the transportation system acquired during the Community Visioning assessment process. As a result, this group is more representative of decision makers.

Transportation Assets and Barriers Analysis
