

(Above) Available color selection for play equipment.

Playground Details

Typical play area, equipment suitable for ages 2 to 5 and 5 to 12.

Examples of specific play equipment: (Bottom) Play Booster, (Top) Play Shaper.

Proposed plan rendering of Anderson Park updates.

Anderson Park

Stanton residents and steering committee members desire updates to Anderson Park (also locally referred to as "Purple Park") that include updated play equipment, better definition and inclusiveness around the perimeter of the playground area, improved pedestrian access and circulation to existing features within the park, increased parking capacity on the south and west sides, and a native planting area at the northwest corner to help manage stormwater runoff.

Anderson Park is located just north of the railroad corridor and east of Halland Avenue. The 5.7-acre park is city-owned and currently has several large overstory trees.

The proposed primary circulation is a 10'-wide paved sidewalk connecting all new parking areas to the existing open air shelter and the playground area. The 6'-wide paved path around the south half of the playground area will allow full accessibility to this space.

The native planting area in the northwest corner will mitigate stormwater runoff from adjacent impervious surfaces, while creating a nice habitat for birds and smaller pollinators.

All of the paved lanes and paths will provide a smooth transition to the existing trail bridge that crosses the creek, connecting its users to the community looped trail system.

Proposed park amenities include new playground equipment.
