Trail Expansion & Trailhead

An easily accessible trailhead with amenities for user comfort and entertainment will enhance the users' experience and serve as an attraction to residents and visitors.

In addition, providing site amenities along the trail will contribute to a positive experience for the trail user. Site amenities include: vertical mileage markers, benches on bench pads that have space for a wheelchair or stroller, trash receptacles, interpretive signage, and trees for shade and seasonal interest. All site amenities should be unified in appearance, just as the proposed bridge matches the existing one in Prarie View Park.
